Hello Ed, Rusty, and Byron:

Here is a draft letter introducing Oleg's project to the Astros. We agreed that this letter is to come from Ed, yes?

As soon as I get approval on this I will go into production, and send the letters to Ed for signature. Ed, do you want to send the signed letters back to me (there will be about 90) for stuffing, or shall I send you the envelopes as well? Also, does anybody have any major objections (I know Rusty, that you have objections, but I want to know the degree to which they are MAJOR) to using LABELS on the envelopes? The way we are currently equipped (e.g., without continuous envelope sheets), using labels is a LOT easier and a LOT less time consuming.....

later, fellas.

Ted

February 10, 1986

Dear &salutation&,

After a successful 2nd Congress in Budapest last October, the Association of Space Explorers is forging ahead with several projects, of which you have recently been reminded of one, the book of Earth photographs and space flier quotations. Our editor Kevin Kelley is making great headway on this project, and we expect the book to be beautiful reflection of the fruits of cooperation between astronauts and cosmonauts.
I am writing you today to briefly inform you about a second publication that the ASE has embarked upon, a book of short (1500 word) essays by space fliers describing their impressions of space flight. This project is being headed up by Soviet Cosmonaut Oleg Makarov, who is responsible for gathering and assembling the materials for publication. The book will be published simultaneously in English and in Russian, and subsequent editions will appear in other languages as well.

Makarov will soon be writing a letter to you inviting you to contribute to this volume. He hopes to include one mug shot and one favorite space photograph of each contributor. In his letter he will explain in greater detail what the ASE hopes to achieve with the book and provide general guidelines for essays.

Best wishes,

Ed
Rusty
Byron

Dear Rusty and Loren,

I just talked to Don Weber, who says hello to everyone and will be out here next week and will be sorry to miss Loren and Evelyn.

The scoop with Don is that he has now send out a million challenger packages to all the YAC chapters and will know by Feb 15 whether he is solvent for the long term and whether he will be producing a catalogue. He will get back to me in a couple of days with quotes on producing the 86 report. Meanwhile, I will get some quotes out here and compute whether it is worth it to have him do it. If he does it, it will be out of house. I don't know if this means he will credit this job to our future challenger packet income. I'll ask him when he calls.

He has received the slide show. I told him that Dick Methia of TISEF will be producing a short instructional guide to go with the show, and that that should be ready in about three weeks.

He wanted to know how many posters from the 2nd Congress we want produced. They are ready to go on that, the signature has been moved.

Since the plan is to include the poster in his catalogue, I told him that we may as well wait until he knows whether he will be producing a catalogue to make a final determination on poster quantity. He thought that was a good idea.
QUESTION: How many posters do we want to produce and have available in any event. 500, 1000? Please let me know.

QUESTION 2: How many reports do we want to produce? 1000? 1500? Please let me know.

Bye bye.
Ted
